Of the Eclipses this Year, 1700.

THere will be but two Eclipses this year, and they are both of the Moon, and but one of them will be seen of us, if the weather permit, which is on the 23 Day of February, in the Morning.

		Thus Calculated,		h. m.	
The	{	Beginning	12	40	} Morn.
		Beginning of total darkness	1	42	
		Middle or true opposition	2	34	
		End of total darkness	3	27	
		End & full recovery of  light	4	29	
		Whole duration from first to last	3	49	
		The Digits Eclipsed will be about 20.			

The Second Lunar Eclipse is the 18th. of August, about 10 min. past 8 in the Morning, when the Moon is under the Earth, and therefore Invisible as to us.

THere also happens a Remarkable Conjunction of Saturn & Mars upon the 29 day of December this year in 10 deg. of Pisces, then to be seen in the Evening, in the South-west after Sun-set: much might be inferred about these things according to Astrologic, but I will leave it to time to manifest the Effects.

The bright shining Planet Venus is our Evening Star this year till the 22 of August, and from thence She is our Morning Star to the years end.

The Suns Ingress into the 4 Cardinal Points.
